

Houses for the future cannot continue to be the same as in the past

Climate change needs housing change

Why is Australian housing unsuitable for the 21st century ?

Houses which rely on fossil fuels have no place in Australia's future

A challenge to the housing industry to rethink its values in a rapidly changing world...

...with a suggestion for a low energy, self reliant house

Derek F. Wrigley

Exposing today's housing practices that are contributing to tomorrow's climate change

Why is ineffective design continuing....

....and why is it approved?

What needs to change?

Who should be interested? *Urban planners, estate developers, regulators, legislators, landscape designers, builders, designers, architects, interior designers, materials and component manufacturers and suppliers, energy suppliers, solar technology manufacturers, lending institutions, real estate agents, educators in all these areasand house buyers who needlessly pay...and pay...and pay...and....*
